## DETAILED ACTION

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on July 23, 2008 has been entered.

### ***Response to Amendment***

2. Amendments to claims 1 and 9 have been entered in the above-identified application. **Claims 1-5, 7-10, 12, 13, and 14-19 are pending.**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5, 7-10, 12, and 13 are rejected under 35 U.S.C. 102(b) based upon a public use or sale of the invention. AI Technologies sold TP7609 and TP7608, a thermoplastic diamond filled interface film that re-melts at the operating temperature of electronic devices (Invoice dated 02/12/1993 to Fermi Labs). These materials are within

the claimed thickness and melting range (Cool Pad TP7609 Data sheet). The method of application includes applying pressure of more than 3 psi, so additional force is applied in the application of the film as claimed. The data sheets for TP7608, from the same product lines, clearly teaches the use of a release sheet as claimed.

### ***Response to Arguments***

4. The rejection of claims 1-5, 7-10, 12, and 13 under 35 U.S.C. 102(b) based upon a public use or sale of the invention has been reinstated given that the claims have been amended to now recite the same invention as that of the claims dated April 29, 2002. Applicants had previously argued that the "Cool Pad" TP7609 materials do not go through a phase change at the operating temperature of an electronic device because they have a glass transition temperature of -55 deg C. The examiner disagreed with the applicants' assessment of the prior art. A glass transition temperature occurs, (a crystalline to amorphous phase change in the solid state) at the low temperature. However, the "Cool Pad" TP7609 materials also have a solid to liquid phase change (Melt/Flow Conditions), which occurs at a temperature of >55 deg. C. The material data sheet for TP609 clearly states, "When a power device goes into operation and generates heat in excess of 60 deg C, TP609 will "melt/reflow" to form intimate interfaces between the contact surface". For this reason, the examiner maintains the position that a phase change occurs within the operating temperature as claimed. Hence, the prior art rejection has been reinstated.

***Allowable Subject Matter***

5. Claims 14-19 are allowed.
